

How to Remove Shared Mailbox Permissions - User Guide

What You Need

1. Install Exchange Online Management Module (One-time setup)

```
Install-Module -Name ExchangeOnlineManagement -Scope CurrentUser
```

2. Choose Your Script

- **SharedMailbox_Remove_FullAccess.ps1** - Removes only FullAccess permissions
- **SharedMailbox_Remove_All_Permissions.ps1** - Removes ALL permissions

Step-by-Step Instructions

Step 1: Prepare Your CSV Files

Create two CSV files in the **same folder** as the PowerShell script:

File 1: users.csv (Users to remove)

```
Email  
john.doe@company.com  
jane.smith@company.com
```

File 2: mailboxes.csv (Shared mailboxes to process)

```
Email  
sales@company.com  
support@company.com
```

Important:

- Column name must be: *Email*, *UserEmail*, *user_email*, or *email_address*
- Save files in the same folder as the script
- Use .csv format (Save As → CSV in Excel)

Step 2: Run the Script

Option A: Quick Run (Files in Same Folder)

1. Open PowerShell
2. Navigate to script folder: `cd C:\Scripts`
3. Run the command:

For FullAccess removal only:

```
.\SharedMailbox_Remove_FullAccess.ps1 -UsersCsvPath "users.csv" -MailboxesCsvPath "mailboxes.csv"
```

For ALL permissions removal:

```
.\SharedMailbox_Remove_All_Permissions.ps1 -UsersCsvPath "users.csv" -MailboxesCsvPath "mailboxes.csv"
```

Step 3: Authenticate to Exchange Online

- A login window will appear
- Sign in with your **admin credentials**

- Wait for 'Successfully connected to Exchange Online' message

Quick Tips

✓ DO:

- Save CSV files in the same folder as the script
- Use simple filenames: users.csv and mailboxes.csv
- Check the log file after completion
- Test with one user/mailbox first

✗ DON'T:

- Don't close the PowerShell window while script is running
- Don't use special characters in CSV filenames
- Don't forget the header row in CSV files
